Foundational Concepts in Medical Terminology

A core component of the course involves understanding the building blocks of medical language:

Word Roots

These are the core elements denoting body parts or systems. For example, cardi- relates to the heart, and gastr- pertains to the stomach.

Prefixes

Precede word roots to modify meaning, such as hyper- meaning excessive or above normal, and hypo- meaning below normal.

Suffixes

Added to the end of words to indicate condition, procedure, or disease. Examples include -itis (inflammation) and -ectomy (removal).

Combining Forms

Created by combining word roots with vowels (usually o), used to connect parts of complex terms, like dermat/o- for skin.

Understanding how these components interact enables learners to analyze unfamiliar terms, breaking them down into understandable parts.
