5. **Retention Ponds:** Ponds designed to hold runoff, allowing sediments to settle and recharge groundwater.

6. **Check Walls and Gabions:** Structures that stabilize slopes and prevent landslides.

Non-Structural Measures

Non-structural measures focus on land management practices and policy interventions:

1. **Crop Rotation and Cover Crops:** Using diverse crops to improve soil health and reduce erosion.
2. **Afforestation and Reforestation:** Planting trees to stabilize soil and improve water infiltration.
3. **Proper Land Use Planning:** Zoning areas prone to erosion and restricting unsuitable activities.
4. **Education and Community Involvement:** Raising awareness among farmers and local communities about conservation practices.
5. **Water Harvesting Techniques:** Collecting and storing rainwater for agricultural and domestic use.

Designing and Implementing Conservation Projects

Effective soil and water conservation engineering requires a systematic approach, integrating scientific principles with local conditions.

Steps in Conservation Project Planning

1. **Site Assessment:** Analyzing soil types, slope gradients, rainfall patterns, and land use.
2. **Identification of Problems:** Pinpointing erosion hotspots, water scarcity areas, and pollution sources.
