Introduction to Ophthalmology for Residents

Understanding the Scope of Ophthalmology

Ophthalmology is a specialized branch of medicine focused on the diagnosis, treatment, and prevention of eye diseases. It encompasses a wide range of conditions affecting: - The anterior segment (cornea, anterior chamber, iris, lens) - The posterior segment (retina, vitreous, optic nerve) - Ocular adnexa (eyelids, lacrimal apparatus, orbit) - Visual pathways and neuro-ophthalmology A solid foundation in ocular anatomy and physiology is crucial for effective clinical practice.

The Role of the Beginning Resident

As a resident, your primary responsibilities include: - Conducting thorough patient histories and examinations - Developing differential diagnoses - Ordering and interpreting diagnostic tests - Managing common ocular conditions - Assisting or performing surgical procedures under supervision Success in these areas requires a combination of theoretical knowledge, practical skills, and clinical judgment.

Essential Ophthalmic Examination Skills

Basic Equipment and Setup

To perform effective eye examinations, ensure access to: - Slit-lamp biomicroscope - Ophthalmoscope - Tonometer (Goldmann or non-contact) - Visual acuity charts (Snellen or LogMAR) - Penlight and Moorfield's card - Fluorescein dye and cobalt blue filter - Pupillometer Familiarity with the operation and maintenance of these tools is fundamental.

Step-by-Step Examination Approach

1. Visual Acuity Testing: Assess best-corrected visual acuity (BCVA) for each eye. 2. External Inspection: Examine eyelids, lashes, conjunctiva, and sclera for abnormalities. 3. Pupillary Examination: Check for afferent pupillary defect (APD) using swinging flashlight test. 4. Slit-Lamp Examination: Inspect anterior segment structures in detail. 5. Intraocular Pressure (IOP): Measure to evaluate for glaucoma. 6. Fundoscopy: Use ophthalmoscope to examine the posterior segment. Mastering this systematic approach ensures no critical findings are missed.

Postoperative Care

- Monitor for infection, inflammation, and complications - Prescribe appropriate medications - Schedule follow-up examinations

Managing Emergency Ophthalmic Cases

Acute Angle-Closure Glaucoma

- Symptoms: Severe pain, nausea, halos around lights - Immediate steps: - Lower IOP with IV mannitol or hyperosmotic agents - Initiate topical drops (timolol, pilocarpine) - Arrange urgent referral for laser or surgical intervention

Trauma

- Assess for hyphema, globe rupture, orbital fractures - Protect the eye; avoid pressure on the globe - Urgent imaging and specialist consultation

Sudden Loss of Vision

- Evaluate for retinal detachment, central artery occlusion - Immediate referral to ophthalmology for intervention
