Introduction to Signals and Systems

What Are Signals and Systems?

Signals are functions that convey information about the behavior or attributes of some phenomenon. They can be classified based on various parameters such as continuity, periodicity, and domain: - Continuous-time signals: Defined for all real numbers (e.g., analog audio signals). - Discrete-time signals: Defined at discrete instances (e.g., digital audio samples). - Periodic signals: Repeat after a fixed interval. - Aperiodic signals: Do not repeat. Systems, on the other hand, are entities that process signals to produce an output based on a specific operation or transformation. Examples include filters, amplifiers, and control mechanisms.
