Introduction to Pharmaceutical Water Systems

Pharmaceutical water systems are engineered networks designed to produce, distribute, and maintain high-purity water suitable for manufacturing, cleaning, and testing. Unlike municipal water supplies, pharmaceutical water must meet strict microbiological, chemical, and endotoxin specifications. The primary types include: - Pure Water (PW): Suitable for general manufacturing and cleaning, with moderate microbiological limits. - Water for Injection (WFI): Must meet the most stringent standards due to its direct contact with sterile products. - Water for Hemodialysis (WHD): Used specifically in dialysis, with unique purity requirements. - Sterile Water: Prepared via sterilization processes for injection purposes. The design of these systems involves selecting appropriate technologies, materials, and configurations to ensure consistent water quality, safety, and regulatory compliance.
